Why choose us ?

Reinforced composite

The aluminium alloy comes with strong bending strength, so that ATLLAS™ is free of creep deformation even in long-span assembled structures.

Weather resistant

Unlike natural solid timber, BPC(Bamboo plastic composite) contains 3% chemical additive agent, including anti-UV agent and mildewproof agent, which allows ATLLAS™ a better performance in outdoor durability.

Light weight

Low density of aluminium matching hollow structure offers ATLLAS™ a lighter body than solid board. This factor will not only reduce the load bearing burden of buildings, but it will also save the cost in sea freight.

High precision

Aluminum alloy made according to national standard has high dimensional accuracy, so that the fitness of ATLLAS™ and accessories is higher and firmer.

Natural appearance

Differing from painted aluminium or aluminium with plastic mebrane,BPC(Bamboo plastic composite) coating with 60% natural bamboo fibra presents a natural wood look like solid timber.

Material Analysis

ATLLAS™ has 3 presentations on the coating material, including BPC, Anti-UV elastomer and Co-extrusion. When Anti-UV coating is applied to the aluminium alloy, ATLLAS™ will offer a better performance in aging resistance. Noise proof factor is another lightspot of elastomer material, so that you'll be free of the tick noises in rainy days.

Material Analysis

Co-extrusion coating material can be embossed with various grains. The grain can be consistent with that of your outdoor decking. Beside, there are bi-color choices for Co-extrusion coating to meet your various aesthetic appreciation.
